T7.2.3-Structure Diagram

Answer the following questions.

Question 1

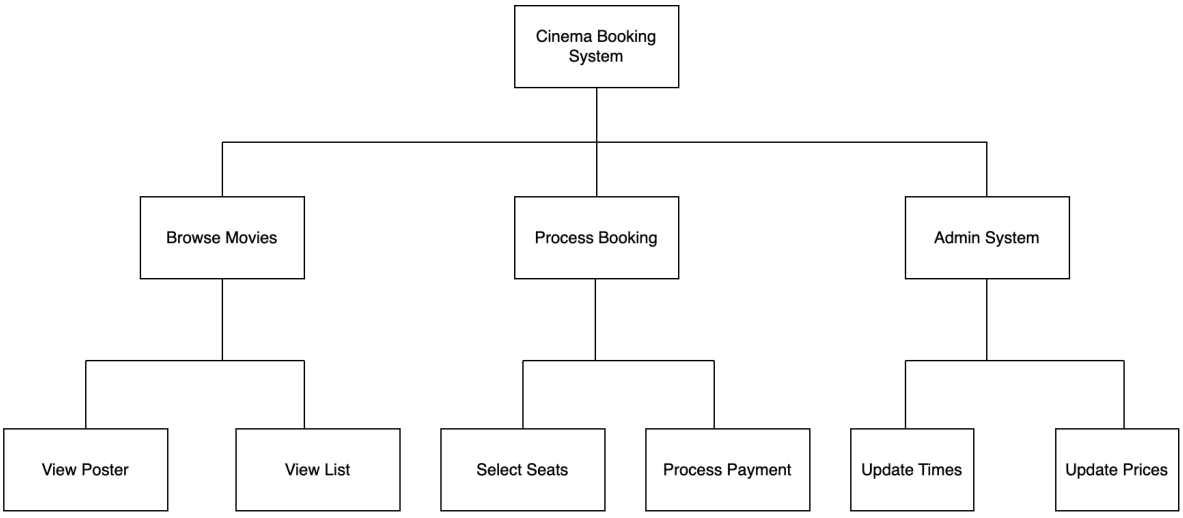

An **online cinema booking system** is an example of a computer system that is made up of sub-systems.

The cinema booking system:

- allows the user to browse available movies as posters or as a schedule list
- allows the user to select their seats and pay for the booking
- allows the cinema administrator to update movie timings and seat pricing.

Complete the structure diagram for the given parts of the cinema booking system.

Answer:

Question 2

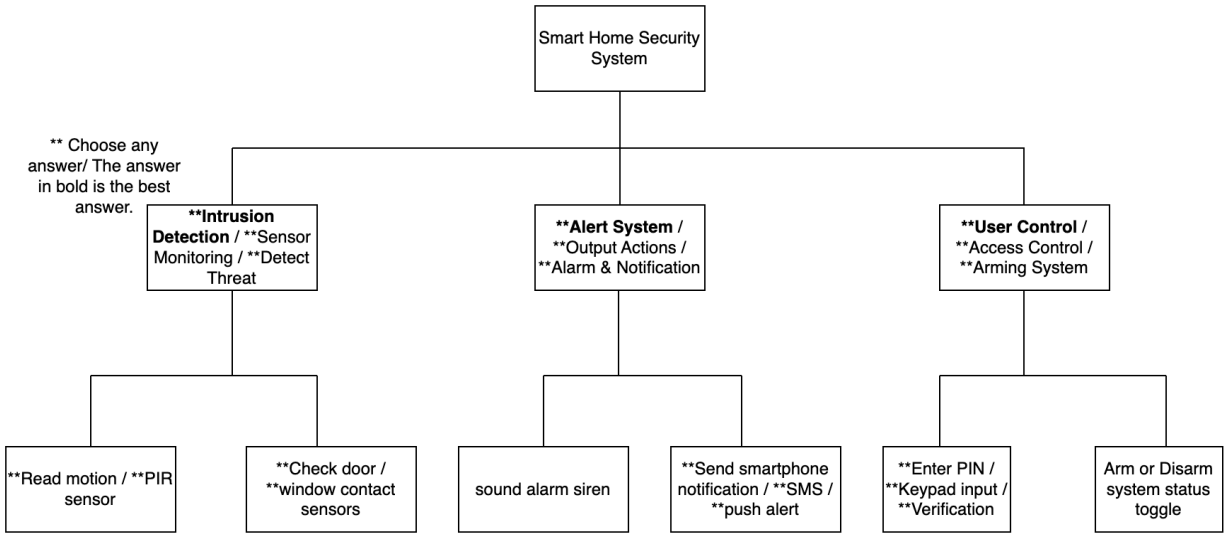

A **smart home security system** is an example of a computer system that is made up of sub-systems.

The security system:

- detects motion and checks for open doors or windows
- sounds an alarm siren and sends an alert notification to the homeowner's smartphone
- allows the homeowner to enter a PIN code to arm or disarm the system.

Complete the structure diagram for the given parts of the smart home security system.

Answer:

Question 3

An **automated multi-storey car park system** is an example of a computer system that is made up of sub-systems.

The car park system:

- detects vehicle entry by scanning the car's number plate using an ANPR camera or issuing a paper ticket
- displays the total number of currently available parking spaces on an external digital road sign
- processes payment at the exit barrier by taking contactless card payment or calculating cash inserted.

Complete the structure diagram for the given parts of the car park system.

Answer:
